FortiADC

Available in

Appliance | Virtual | Cloud | SaaS | FortiFlex

Welcome to the Fortinet FortiADC Ordering Guide. This guide is designed to help customers understand and navigate the various options available for deploying Fortinet's advanced Application Delivery Controller (ADC), which optimizes application delivery, enhances performance, and ensures application security.

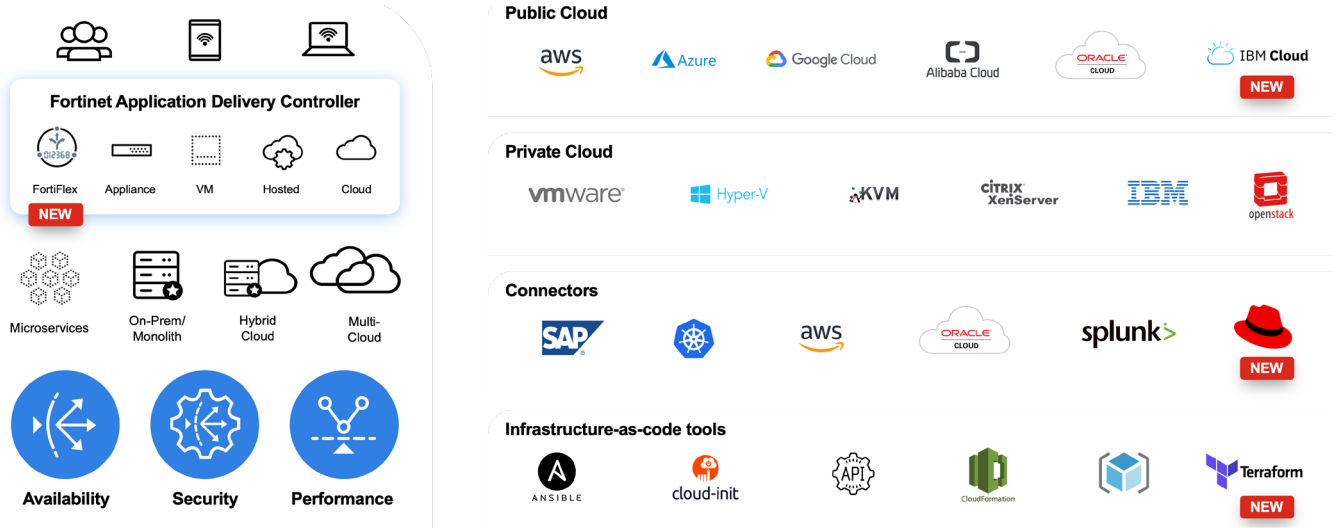
FortiADC helps organizations integrate on-premises data centers with public cloud environments to optimize application performance, enhance scalability, and improve overall business agility. It offers robust L4-L7 load-balancing capabilities with scripting support, advanced SSL services (offloading and mirroring), application acceleration, Agentless Application Gateway, Global Server LB, and built-in security features like Web Application Firewall (WAF) protection (including Adaptive Learning and OWASP Top10 Compliance), DDoS protection, and ZTNA. With flexible deployment options and integration into the Fortinet Security Fabric, FortiADC empowers businesses to deliver exceptional application experiences and security.

This guide outlines:

- **Key Capabilities**: FortiADC offers robust L4-L7 load-balancing capabilities with Scripting support, advanced SSL Services (Offloading and mirroring), application acceleration, application authentication, and built-in security features such as Web Application Firewall protection (e.g., Adaptive Learning, OWASP Top10 Compliance), and DDoS Protection.
- **Deployment Options**: FortiADC is available as an Appliance, Virtual Machine, Cloud, SaaS, and through FortiFlex.
- **Supported Public Clouds**: FortiADC can be deployed on public clouds including AWS, Azure, Google Cloud, Alibaba Cloud, Oracle Cloud, and IBM Cloud.

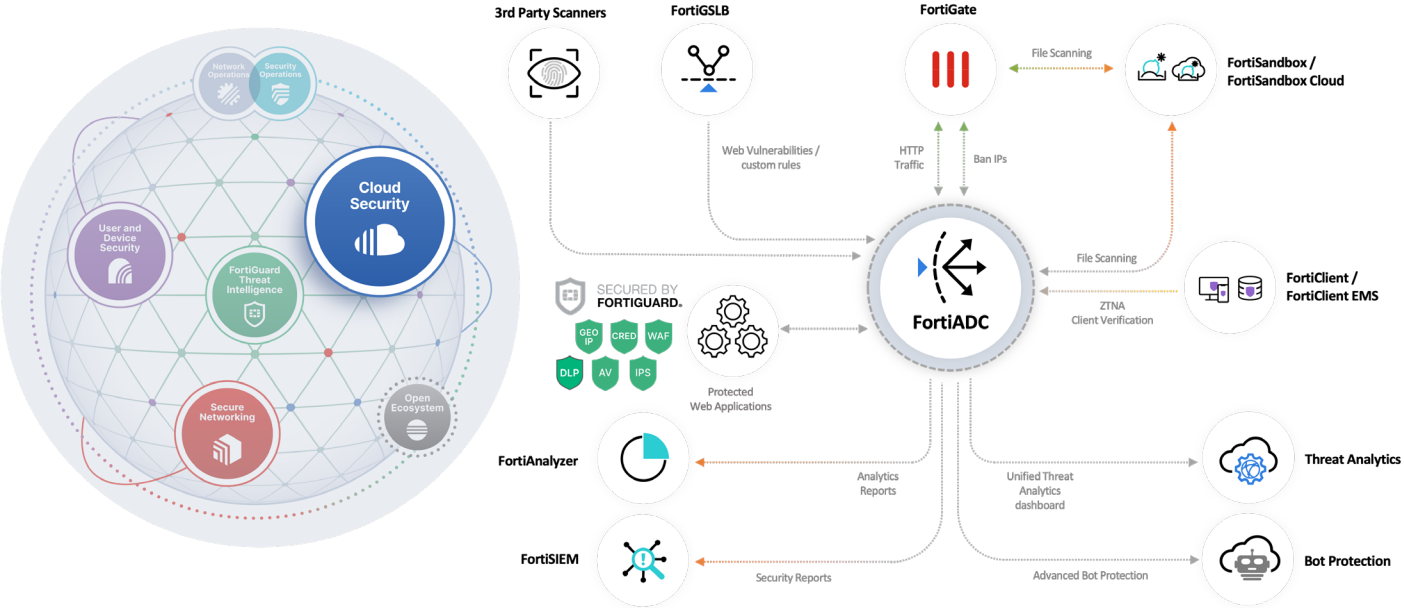
FortiADC supports standard deployment requirements and is available in multiple form factors:

- **Hardware appliances:** FortiADC is available as physical appliances with different throughput combined with hardware-based SSL offloading. and scalability options, ranging from 5 Gbps to 350 Gbps. FortiADC appliances are suitable for organizations that require high-performance ADC solutions for their on-premises infrastructures.
- **Virtual appliances:** FortiADC can be deployed as virtual machines in virtualized environments, which offers flexibility, scalability, and cost-effectiveness. This option is ideal for organizations with virtualized or cloud-based infrastructures and is supported via Fortinet **FortiFlex** (https://www.fortinet.com/products/fortiflex) on-demand licensing and provisioning for security solutions and services for all environments.
- **Cloud service:** FortiADC is also available as a cloud-based service so that organizations can leverage ADC capabilities without needing hardware or software deployment. This option provides agility, scalability, and ease of management for cloud-native applications. It is also supported via FortiFlex.



FortiADC Security Fabric

FortiADC is part of the Fortinet Security Fabric, a comprehensive and integrated security platform that provides unified protection across your entire network and application. By combining FortiADC with other Fortinet solutions, you create a powerful security ecosystem that safeguards your applications and data from end to end.



FortiADC Product Offerings

FortiADC application delivery controllers are available as hardware appliances, virtual machines, and public cloud VMs, and offer a new bundles license on any of the form-factors.

FortiADC Manager

NAME	SKU	DESCRIPTION
Up to 10 FortiADC virtual management appliances	FAD-CM-BASE	FortiADC virtual management appliance. Manages up to 10 FortiADC appliances. Designed for VMware vSphere platforms
Unlimited FortiADC virtual management appliances	FAD-CM-UL	FortiADC virtual management appliance. Manages unlimited FortiADC appliances. Designed for VMware vSphere platforms. Requires BASE license.

Fortinet Training and Certification

FortiADC Administrator Training

This course covers configuring and administering the most commonly used features of FortiADC. It includes exploring Layer 4 and Layer 7 server load balancing, link load balancing, global load balancing, high availability (HA), firewall policies, advanced routing, and additional features. It covers FortiADC web application protection features, including web application firewall (WAF) with adaptive learning, and other enhanced security features such as DDoS, IPS, and so on.

FORTIADC CHEAT SHEET

The Space

The ADC market continues to evolve with application automation and software-centric use cases:

- **Application automation** and integration with microservices - Support K8s and OCP Ingress Controller
- The **most Secure** ADC in the market with WAF (OWASP-top10), Bot Protection, DLP, IPS, AV, Sandbox, DDoS Protection and more...
- **"Over the top"** ADC services (GSLB)
- **Application visibility** and ease-of-use focus

Ordering Guide

Product Offerings: OPEX and CAPEX options

OPEX: two options available:

- **FortiADC-VM:** S-series provides yearly subscription for IaaS/private cloud. All-inclusive standard/advanced bundle options.
- **FortiFlex:** FortiADC VM is part of the new FortiFlex program (https://www.fortinet.com/products/fortiflex), providing you the flexibility to right-size your services and spend

CAPEX: three options available:

- **HW appliances:** selected by throughput (5 Gbps to 350 Gbps)
- **FortiADC-VM:** preferably choose S-series though perpetual license is available.
- **FortiFlex:** FortiADC VM is part of the new FortiFlex program (https://www.fortinet.com/products/fortiflex), providing you the flexibility to right-size your services and spend

Where to Find More Info

- **Resources:** FortiADC HighSpot page, FortiADC Pitch Deck, Application Delivery Controller Intro video, FortiADC Solution Brief
- **Training:** the most commonly use FortiADC features

Product Lineup

FortiADC product line includes various options:

- **On-premise:** any FortiADC can be purchased as HW, VM, and Cloud VM models. Models are from 5 Gbps and up to 350 Gbps throughput.
- **Cloud VM:** FortiADC also runs on public cloud (AWS, OCI, Azure, GCP, and IBM). We support perpetual licenses (BYOL and PAYG).

Major Capabilities to Pitch

- **Application connectors and automation** for autoscaling and service availability.
- **Advanced application LB** with L7 routing, advanced health checks, and application optimization.
- **Unleash the power of the script:** With FortiADC Script, you can manage and control network/application traffic.
- **SSL visibility and inspection:** SSL-based attacks are rising. With FortiADC, you can monitor and block SSL attacks.
- **Global LB:** real-time traffic LB between multiple locations/data centers for best availability and quality of experience to reduce latency.
- **Application security:** The most secure ADC in the market with WAF (OWASP Top-10), antivirus, IPS, DDoS protection, and Sandbox integration.
- **Ease of use:** FortiView provides real-time data analytics and application visibility. FortiADC has integration with Splunk, FortiAnalyzer, and FortiSIEM.
- **Application Access Gateway**: Provides secure, agentless access to internal applications through a centralized App portal.
