FortiCNAPP

Welcome to the Fortinet FortiCNAPP Ordering Guide. This guide helps customers understand and navigate the options available for deploying Fortinet's comprehensive, unified, and data-driven platform for securing cloud environments from code to cloud, including visibility across infrastructure, workloads, identities, and sensitive data.

This guide outlines:

- **Key Highlights**: Details on continuous compliance against major industry standards (e.g., SOC2, ISO 27001), advanced threat detection, sensitive data discovery and classification, risk reduction and prioritization, and improved productivity.
- **Cloud Security License Tiers**: Information on the Standard, Professional, and Enterprise tiers, each offering different levels of functionality for posture management, threat detection, risk prioritization, and data security visibility across cloud environments.
- **Code Security License**: Features of the Code Security add-on license, including Software Composition Analysis (SCA), Static Application Security Testing (SAST), Dynamic Application Security Testing (DAST), Infrastructure as Code (IaC) security, Software Bill of Materials (SBOM) creation, License Compliance, and Secrets scanning.
- **Deployment Options**: FortiCNAPP is available as a cloud-based SaaS solution for various cloud environments including AWS, Google Cloud, Microsoft Azure, and Kubernetes. It can be purchased through the AWS Marketplace or Google Cloud Marketplace.

Introduction & Overview

Product/Solution Description

FortiCNAPP (Cloud-Native Application Protection Platform) is a comprehensive, unified, data-driven platform that empowers organizations to secure everything from code to cloud. Using both agent and agentless technologies, FortiCNAPP continuously collects, correlates, and analyzes a broad range of data to provide security teams with the context needed to identify and remediate risks faster. It offers an automated, end-to-end security solution for multicloud and hybrid infrastructures, helping businesses evaluate architectures against best practices, identify vulnerabilities early in the CI/CD pipeline, and ensure compliance.

FortiCNAPP also provides Data Security Posture Management (DSPM) capabilities that help organizations discover sensitive data across cloud storage services and understand how that data may be exposed through identities, vulnerabilities, or misconfigurations. This enables security teams to prioritize and remediate the data exposures most likely to result in a breach.

Key Highlights

- **Continuous Compliance**: Ensure continuous compliance against major industry standards such as **SOC2, ISO 27001, HIPAA, HITRUST, PCI, NIST, FISMA, PII, and CIS Benchmarks**.
- **Advanced Threat Detection**: Features **anomaly detection** to reduce alert noise by automatically building baseline models of behavior and alerting only on critical, anomalous events.
- **Risk Reduction & Prioritization**: Surfaces only the most critical risks, eliminating alert fatigue, and provides context-rich visualizations for quick action to prevent financial losses and brand damage.
- **Automated Security**: Eliminates the need to write and maintain rules for threat detection.
- **Deep Visibility**: Gain visibility across infrastructure, workloads, identities, and sensitive data from code to cloud.
- **Data Security Visibility**: Discover and classify sensitive data across cloud storage services and understand how sensitive data may be exposed through identity access, vulnerabilities, and misconfigurations.
- **Improved Productivity**: Helps to investigate alerts 4x faster.

Available In

FortiCNAPP is a **cloud-based SaaS solution**, available for various cloud environments including **Amazon Web Services (AWS), Google Cloud, Microsoft Azure, or Kubernetes**. It be purchased through the **AWS Marketplace or Google Cloud Marketplace**.

Product Portfolio & Capabilities

FortiCNAPP is offered in two, independent parts:

1. **Cloud security platform**
2. **Code security**

Each can be purchased independently.

Cloud Security Platform

Cloud Security tiers include capabilities such as Cloud Security Posture Management (CSPM), Cloud Workload Protection (CWP), Cloud Infrastructure Entitlement Management (CIEM), attack path analysis, and Data Security Posture Management (DSPM) for discovering, classifying, and prioritizing sensitive data exposures.

FortiCNAPP offers the following tiers:

- **Standard**: Start protecting what you build and run in the cloud.
- **Professional**: Gain advanced functionality to prioritize risks and detect threats.
- **Enterprise**: Unlock the full breadth of capabilities to prioritize risks, prove compliance, find threats, and operationalize security across clouds.

	STANDARD	PROFESSIONAL	ENTERPRISE
SECURITY POSTURE MANAGEMENT FOR CLOUD AND KUBERNETES (CSPM & KSPM)			
Resource discovery and configuration management, includes custom policies	✓	✓	✓
Secrets detection	✓	✓	✓
Compliance reporting (SOC, ISO, CIS, PCI-DSS, etc.)	✓	✓	✓
Infrastructure as Code scanning			✓
CLOUD VULNERABILITY ASSESSMENTS			
Inline, container, and host scanning	✓	✓	✓
Standard risk-based scoring (CVSS, CVE, and exploit data)	✓	✓	✓
Custom risk-based scoring (active vulnerability detection and Internet exposure)		✓	✓
Enforcement for vulnerable images (Kubernetes admission controller)		✓	✓
CLOUD INFRASTRUCTURE ENTITLEMENT MANAGEMENT (CIEM)			
Entitlement discover and scoping guidance for overly permissive identities		✓	✓
ATTACK PATH ANALYSIS			
Top risk dashboard and alerting with Exposure Polygraph visualization		✓	✓
THREAT DETECTION			
CLOUD DETECTION AND RESPONSE (AUDIT LOG MONITORING)			
Polygraph behavior-based threat detection for cloud accounts	✓	✓	✓
Polygraph behavior-based threat detection for managed K8s services		✓	✓
WORKLOAD SECURITY FOR VIRTUAL MACHINES, CONTAINERS, AND KUBERNETES			
Continuous runtime monitoring and snapshots			✓
Polygraph behavior-based threat detection			✓
Threat detection based on signatures and custom policies			✓
File integrity monitoring			✓

	STANDARD	PROFESSIONAL	ENTERPRISE
DATA SECURITY POSTURE MANAGEMENT (DSPM)			
DATA DISCOVERY			
Automatically discover data stored across cloud object storage services such as AWS S3 and Azure Blob Storage, providing visibility into where data resides across cloud environments	✓	✓	✓
DATA CLASSIFICATION AND MALWARE DETECTION (FORTIGUARD POWERED)			
Automatically identify sensitive data using FortiGuard Labs data signatures (40+ patterns), covering common data types such as personally identifiable information (PII), financial records including PCI DSS-related credit card data, and healthcare data. Detect malware, including zero-day threats, using FortiGuard-powered antivirus scanning to further reduce risk and exposure.			✓
DATA EXPOSURE RISK			
Identify sensitive data exposures by correlating discovered data with identity permissions, vulnerabilities, and attack paths to prioritize the highest-risk data exposures			✓

Code Security

Secure the code for your cloud-native applications and reduce your overall risk footprint. This license is for one code-contributing developer (MOQ of 20) and includes FortiCare Premium. A code-contributing developer is someone who has actively written or submitted code (such as uploading new code or making changes) in the past 90 days.

CODE SECURITY FEATURES	
Software Composition Analysis (SCA)	Identifies and analyzes open-source components and third-party libraries used in your applications to find known vulnerabilities. It also helps organizations maintain an up-to-date **Software Bill of Materials (SBOM)** and manage open-source **License Compliance** risks.
Static Application Security Testing (SAST)	Scans application's source code to find security vulnerabilities before the code is deployed. It uses sophisticated analysis to provide highly accurate results with a low rate of false positives.
Infrastructure as Code (IaC) Security	Integrates with organization development process to identify misconfigurations and security risks in your IaC templates (e.g., Terraform, CloudFormation) to prevent vulnerabilities from being deployed into the cloud environment.
Secrets Scanning	Part of the platform's attack path analysis, which visualizes how an attacker could exploit risks. It helps to identify and highlight exposed secrets—such as API keys or credentials—that an attacker could use to gain access to your environment.
License Compliance	Tied to Software Composition Analysis and helps users assess and manage the open-source license risks associated with the third-party components used in their applications.
Software Bill of Materials (SBOM)	Automatically maintains a real-time SBOM for every application. The SBOM is a comprehensive list of all the software components, including open-source libraries, that make up your applications, which is essential for understanding your software supply chain and associated risks.
Dynamic Application Security Testing (DAST)	A method of application security testing that simulates real-world attacks on a running application to find vulnerabilities. It is a “black box” approach because it doesn’t require knowledge of the application’s internal code or structure, instead testing from an external, user-like perspective.

Use Cases & Deployment Scenarios

Typical Deployments/Scenarios

- Holistically evaluating existing cloud architectures for adherence to best practices.
- Identifying and remediating vulnerabilities in the CI/CD pipeline.
- Ensuring continuous compliance against industry standards.
- Rapid CNAPP production onboarding with expert guidance.

Ordering Information

FortiCNAPP Cloud Security licenses are based on the number of protected compute resources, measured in vCPUs across cloud workloads. vCPU consumption is calculated based on Agent and Resource Management cloud configuration only. DSPM and Agentless Workload Scanning (AWLS) are not included in the vCPU usage calculation.

SKUs & Bundles

SKU	DESCRIPTION	MOQ
FORTICNAPP LICENSES		
FC1-10-LACWK-1063-02-DD	FortiCNAPP - Standard tier. Entitlement per-vCPU, including FortiCare Premium. (1, 3, 5 Yr)	500 vCPUs
FC1-10-LACWK-1064-02-DD	FortiCNAPP - Professional tier. Entitlement per-vCPU, including FortiCare Premium. (1, 3, 5 Yr)	375 vCPUs
FC1-10-LACWK-1065-02-DD	FortiCNAPP - Enterprise tier. Entitlement per-vCPU, including FortiCare Premium. (1, 3, 5 Yr)	250 vCPUs
FC1-10-LACWK-1306-02-DD	FortiCNAPP Code Security – per code-contributing developer (MOQ: 20). Includes FortiCare Premium and an equal number of FortiDAST application scan entitlements (1 URI-based web application per developer)... (1, 2, 3 Yr)	20 Developers
FC1-10-DEVSC-216-02-DD	FortiDAST Add-On for FortiCNAPP Code Security – 5 additional app entitlements, stackable. Used in addition to Code Sec-included DAST apps. (1, 2, 3 Yr) – This license requires the 'base' license, SKU: FC1-10-LACWK-1306-02-DD	5 applications
PROFESSIONAL SERVICES		
FP-10-QSCNAPP-DP1-00-02	FortiCNAPP QuickStart Standard: Quick implementation and onboarding.	2 days
FP-10-QSCNAPP-DP3-00-03	FortiCNAPP QuickStart Enterprise: Thorough implementation and onboarding.	5 days
FP-10-CNAPP-ODSF	FortiCNAPP On-Demand Services Flex: Flexible blocks of days with a designated CNAPP architect.	6 days
FP-10-PS001-831-01-01	FortiCNAPP Cloud Consulting Service-Essential.	3 days
FP-10-PS001-831-01-01	FortiCNAPP Cloud Consulting Service-Preferred.	5 days
FP-10-PS001-831-01-01	Cloud Security Posture Assessment (CSPA).	4 days
FP-10-PS001-831-01-01	Application Security Posture Assessment (ASPA).	3 days
FP2-10-PS001-832-02-12	Part-Time Designated Cloud Engineer.	2 days/week for 1 year

Order Lifecycle

Standard order lifecycle processes apply for **New Orders, Adding More, Renewals, and Upgrades**. It is recommended to **use the "co-term" tool to align contract expiration dates** for simplicity and management, especially when adding more services to existing contracts.

Support and Professional Services

FortiCare Support

FortiCNAPP licenses generally **include FortiCare Premium Support**, which offers ticket handling, firmware and general upgrades.

Deployment Services

- **FortiCNAPP QuickStart Standard**: A two-day service for quick implementation and onboarding with guidance from expert architects, including workshops and a Getting Started Plan.
- **FortiCNAPP QuickStart Enterprise**: A five-day service for thorough implementation with high-touch guidance, including more workshops, a technical deployment plan, and compliance burndown reports.
- **FortiCNAPP On-Demand Services Flex**: A six-day flexible engagement with a designated architect for tailored assistance like tuning integrations, training, and creating custom solutions.

Cloud Consulting Services

- **Essential Service**: A three-day service focused on quick onboarding and integration with the Fortinet Security Fabric.
- **Preferred Service**: A five-day advanced service that expands on the Essential package to include CI/CD integration, automation scripting, and design documentation.
- **Posture Assessments**: Vendor-agnostic services to evaluate your cloud security (CSPA, 4 days) or application security (ASPA, 3 days) posture against best practices.
- **Part-Time Cloud Engineer**: A designated engineer to assist with all Fortinet cloud products and best practices, two days per week for one year.

Training & Certification

While specific FortiCNAPP certifications are not detailed, **training and enablement on the FortiCNAPP platform is offered as part of the professional services**. For broader cybersecurity training, customers can explore the **Fortinet Network Security Expert (NSE) Training and Certification Program**.

Appendices & Additional Information

Frequently Asked Questions (FAQs)

Is FortiCNAPP an agent-based or agentless solution?

It employs a combined agentless and agent-based approach for data collection.

What compliance standards does FortiCNAPP support?

It supports SOC2, ISO 27001, HIPAA, HITRUST, PCI, NIST, FISMA, PII, and CIS Benchmarks.

Does FortiCNAPP integrate with other security tools?

Yes, it integrates with tools like Jira, Slack, Splunk, ServiceNow, Datadog, etc.

How does FortiCNAPP reduce alert fatigue?

It uses Polygraph anomaly detection to surface only the most critical, anomalous events.

How does FortiCNAPP integrate with the Security Fabric?

FortiCNAPP currently has integrations with FortiGate, FortiAnalyzer, FortiSIEM and FortiSOAR.

What is Data Security Posture Management (DSPM)?

DSPM capabilities in FortiCNAPP help organizations discover, classify, and prioritize risks to sensitive data stored in cloud environments. By correlating data locations with identities, vulnerabilities, and attack paths, FortiCNAPP helps prioritize the most critical data risks.
